

We hold substantial sales stock of common buckets but because we manufacture in-house, we have the ability to react to customer demand for special, custom built equipment. Rather than simply try to sell what we have in stock, we also offer customers the ability to specify the correct kit to get their work done quickly and efficiently.

Manufactured in our in-house Engineering facility in Rugeley, Staffordshire. We have been selling mini digger buckets since 1991 and have built up a reputation for value, quality and efficient service.

All buckets over 1.0t feature welded pivot bosses for greater wear resistance. Un-bossed pivots are cheaper, but will always wear out faster, because plate does not have the same bearing properties as machine-grade steel.

150mm (6")

230mm (9")

300mm (12")

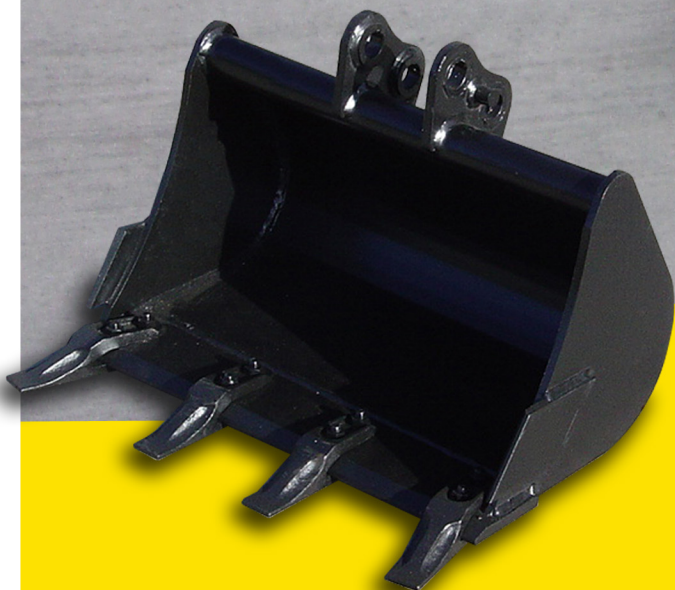

450mm (18")

600mm (24")

760mm (30")

900mm (36")

All digging buckets for 1 to 6 tonne excavators feature two-leg, bolt-on style cast teeth.

Massive stocks of common types and sizes of excavator bucket in stock in our Rugeley warehouse for immediate despatch.

600mm (24") Digging Bucket, 1.0 to 1.9 tonne weight class
